

## ABOUT ME

It has been around 3 years since I started developing myself in the field of front-end, and I have gained sufficient theoretical and practical knowledge. As someone who is very enthusiastic about learning new things, I have learned the latest and modern technologies in this field and added them to my skills. Over these years, in addition to small and medium-sized projects, I have developed more complex internal management systems with structured and rich content, such as "dashboards" (along with API), and gained extensive experience in front-end. In addition to this, I have been learning and have reached a certain level of proficiency in the technologies related to back-end.
